## Soneera Water Canada partners with Town Of Unity

Representatives of all parties involved celebrate the signing of the waste water treatment agreement. Back row: left to right, Councillor Terry Flaherty; Councillor Ben Weber; Councillor Brian Vandelinde; Graeme Swinnerton, Senior Project Manager, McElhanney Consulting Services Ltd. Front row, left to right, Dr. Vivian Robinson, inventor of Memfree© technology; Mayor Sylvia Maljan; Darrell Behan, CEO Soneera Water.

The Town of Unity signed a Supply and Service Agreement for Water Treatment System with Soneera Water Canada Jan. 29 to upgrade the waste water treatment facilities for the town. The present facilities had been slated for replacement by August 2017. Soneera Water will install a “continuous flow electroflocculation water treatment system” at the present lagoon site. Saskatoon-based civil engineering firm McElhanney Consulting Services Ltd. will work with Soneera Water and together they expect that the system will be commissioned in summer 2016.

The signing of the agreement at the Town Office was attended by representatives of town council, Soneera Water, McElhanney Consulting Services Ltd, senior town staff, and the inventor of the system, Dr. Vivian Robinson.

Mayor Maljan was “incredibly proud” that Unity entered this agreement and will be the pilot site for the technology in Canada.

The agreement was the most economically viable of all alternatives studied. According to the agreement the Town of Unity will be the pilot site for the electroflocculation technology. In return Soneera Water will bear the burden of the cost of the project, \$2.5 million, until it is given its certificate to operate by the Water Security Agency (WSA) of Saskatchewan. Only after the WSA certifies the treatment plant will Unity pay for the specially-priced pilot project.

Prior to the signing of the agree-

ment Mayor Maljan invited everyone around the table to share their thoughts about their involvement. All those present saw the signing as a positive development for both Unity and Saskatchewan.

Physicist Dr. Vivian Robinson, the inventor of the Memfree© technology, began his career by working in government laboratories in Australia for 15 years. Realizing the potential to expand on his work

and develop his own projects Dr. Robinson operated his own high tech manufacturing companies in the private sector which he described as “30 years making equipment that the experts said would never work.” He further clarified this by pointing out that many manufacturing industries, the military, and even NASA were drawn to “the ability to provide potable water” through his simple process.

Darrell Behan, CEO of Soneera Water stated, “I first became aware of technology four or five years ago and was intrigued.” After Dr. Robinson joined the company Behan worked hard to bring the technology to the United States and Canada. After proving the process in Arizona and obtaining a US patent, Unity has become the first major project for the company.
